

## **Release Notes - 24.7**

### **Introduction**

We are pleased to announce our v24.7 release. The key objective of the release is to introduce the Weekly & Monthly Location Job Targets.

### **New Feature: Weekly & Monthly Location Job Targets**

- Ability to enable/disable the Location Job Targets at site level.
- Access the Location Jobs Targets screen where users have the ability to:
  - a. Manage (add, edit, delete) location jobs per calendar per a process
  - b. Add and enable new locations
  - c. Enter planned targets & track scheduled values
  - d. Assign & un-assign job tags & location tags
- Create and Configure Weekly Location Job views on the Scheduler, where users can:
  - a. Schedule tasks from the standard job panel to weekly location jobs
  - b. Track the previous, current & upcoming weeks' planned, scheduled, and actual values
  - c. Complete actions to manage scheduled tasks (the weekly jobs views have the same task management functionality as the tasks' views), such as managing tasks' equipment, people & locations
  - d. Assign & un-assign location tags
- Create & Configure Reporting Calendars used to determine the reporting period of each Location Job
  - a. Create an infinite amount of Reporting Calendars on the Manage Reporting Calendar screen
  - b. Configure the start & end dates of the calendars' weeks and months
  - c. Select which Task Types the calendar is relevant to
- Ability to control which users can manage or view Location Job Targets
  - a. Location Job Targets Manager allows users to manage Location Job Targets
  - b. Other users with access to the Planning board, Schedule Screens & Scheduler by default have view-only access to the Location Jobs Target screen.

### **Improvements**

- Ability to see what KPIs need to be entered manually and what are auto-calculated in the Mobile App
- Ability see the task priority on my tasks to ensure the shift is always focused on delivering the most important tasks first in the Mobile App
